CLINICAL DOCUMENTATION · AI SAFETY

AI Use in Clinical Documentation and Note Summarization

Catch errors in AI-drafted notes before they become part of the chart.

DO IT LIKE THIS

1. **Check the timeline**
   Verify onset, duration, and last dose against the source.
2. **Set AI's role**
   Use, limit, or skip AI based on the risk.
3. **Trace every key line**
   Each one must lead back to a trusted source.
4. **Confirm the essentials**
   Check this note's must-not-miss details, every time.

ALWAYS

- Verify time statements against the source
- Use AI to structure, not to decide truth
- Flag contradictions for a human

NEVER

- Trust AI wording over the source
- Finalize a line you can't trace
- Let AI resolve a contradictory history

Proceed when...

- The facts are clear and traceable
- Every key line matches the source

Stop & get help when...

- A time statement could change care
- The history contradicts itself
- A key line can't be traced to a source

THE ONE RULE TO REMEMBER

Use AI to structure the note, not to decide what is true.
